

Myfarminfo

Analytical farm management

Myfarminfo is driven by layers of data including weather information, NDVI values, soil type and structure, disease information, crop maps and mandi information that has been meticulously collected, enhanced and calibrated using most innovative mathematical tools and information assimilated from the farm fields of India.

Data available is at resolution of 250 meters to 25 kilometers and covers entire spectrum of agriculture activity in this country.

- Measure farm level yields accurately
 - Collate yield information over GIS
 - Check accuracy of primary CCE
 - Compare the yields of CCEs with synthetic values derived from NDVI and weather data
- Identify plots of non-loanee farmers and review the crops grown in the area Insurer Special
- Get accurate loss figures /Optimize business losses Government Special
 - Analyze area sown in a crop
 - Apply area correction factors scientifically
 - Apply prevented sowing claims more scientifically
 - Identify cases of mid-season adversity through GIS based proxy indicators
- Arbitrate with right data in hands Government Special
 - Corrected yield information with more advanced tools sharable among arbitrating parties
